## **GR 129-10**

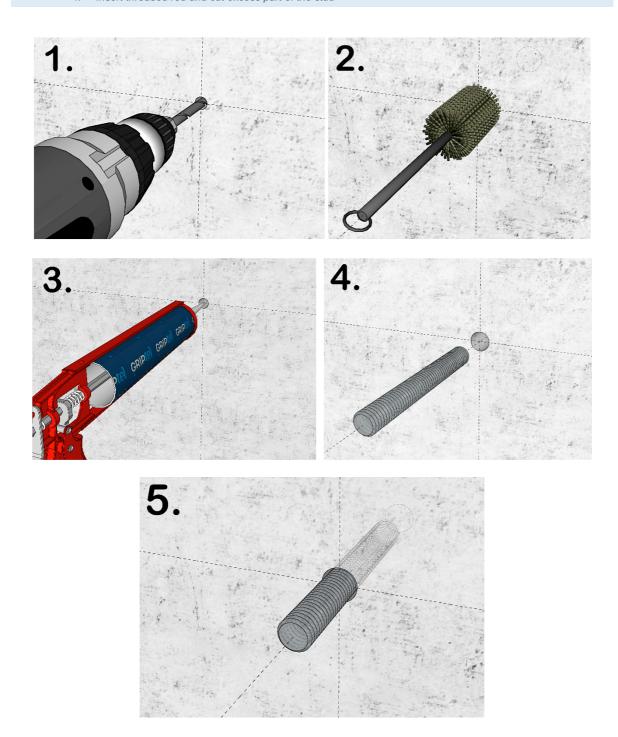

# RAMME PÅ VEGG FOR RU/LR UTSTYR - 2 STK BJELKER 0,8M

## **OVERVIEW**

### 1. PREPARING FOR THE INSTALLATION

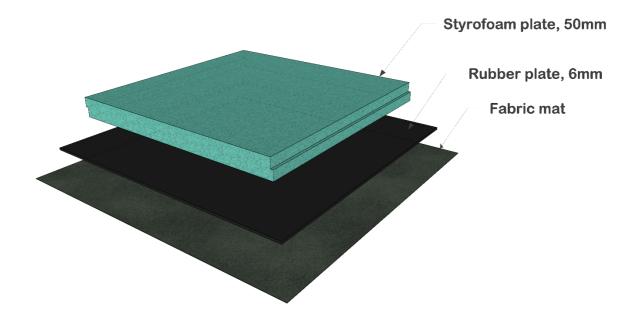

- i
- 1. Drill hole to specified diameter and depth
- 2. Blow out the dust and clean dust and debris using brushing
- 3. Inject adequate MULTICOMPOUND/ Order from our web-shop: "Pluggmasse/Pluggmasse MSC" (if the type of the wall requires, use appropriate anchors/ Order from our web-shop: "SIHYLSTER")
- 4. Insert threaded rod and cut excess part of the stud

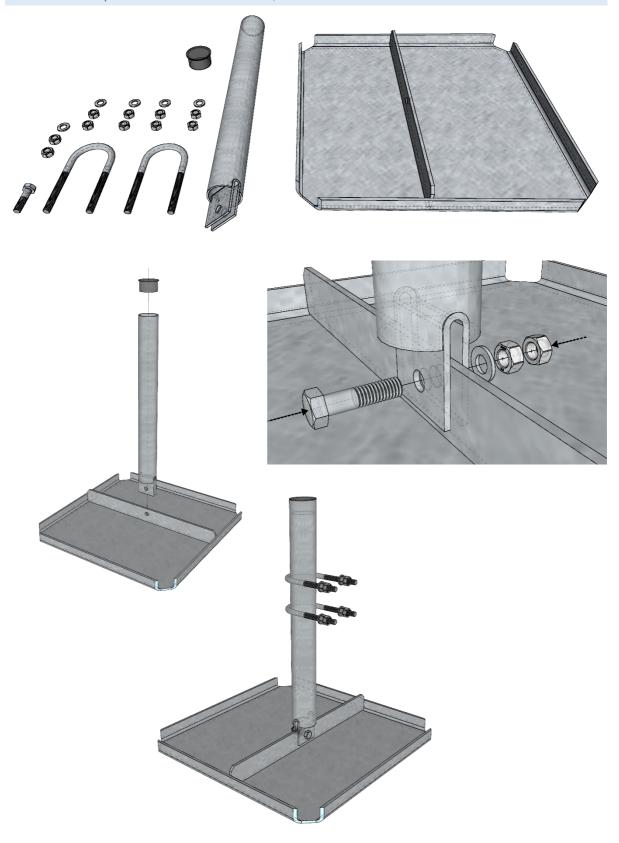

## 2. PREPARE FLORING

Protect the surface from the damaging using Styrofoam plate, rubber surface and fabric mat below each supporting plate

## 3. Lastfordelende plate m. Ø60 rør - L=600mm; GR120-11-P19

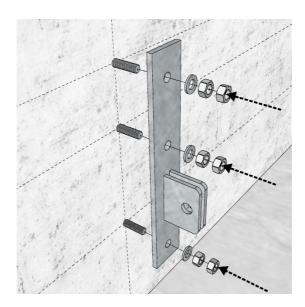

i Place the central tube to the vertical position on the base frame; Cut excess part of the tube after installation;

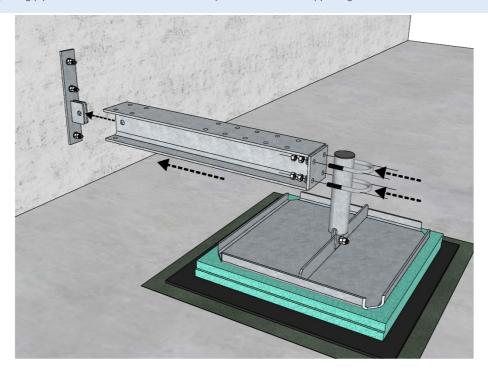

### 4. SUPPORTING WALL BRACKETS

Install 2x wall brackets **GR120-11-P20** on the prepared chemical anchors on the wall; (Recommended: Distance between two wall brackets 1400mm for Platform **GR129-11**)

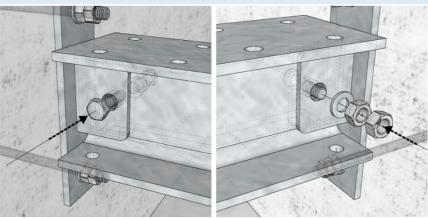

Attach 2x GR120-10-P01 horizontal beams to the prepared wall supports GR129-10-P20 on the wall side and attach vertical support pipe GR120-11-P19 on front end of the beam.

Supporting pipes needs to be cut and level with top of the horizontal supporting beam

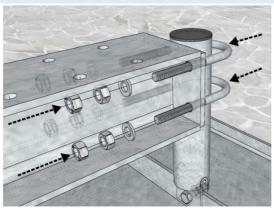

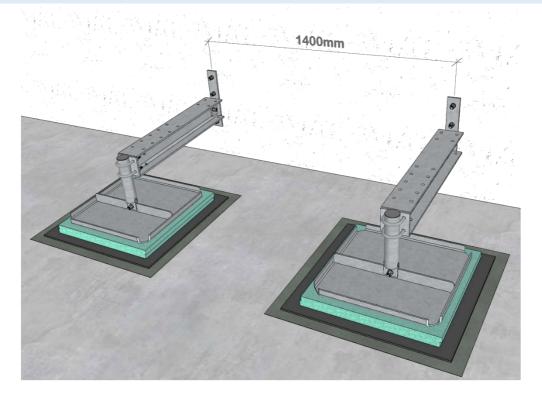

Connect horizontal beam to the wall support using M12x40 bolt/ Use counter bolt

Connect horizontal beam to the vertical support pipe using U-bolts from the GR120-11-P19 set

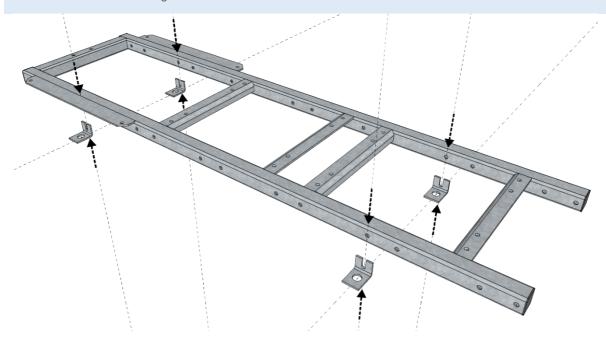

Recommended: Distance between three wall brackets/main horizontal beams should be 1400mm

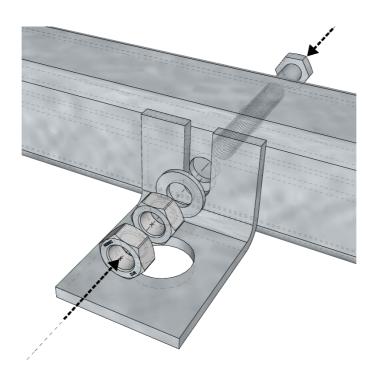

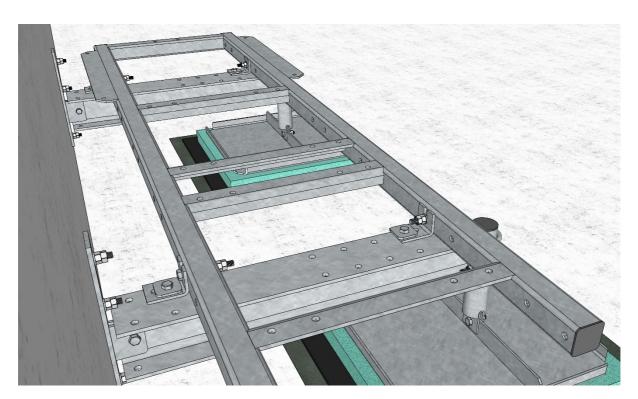

## 5. EQUIPMENT FRAME

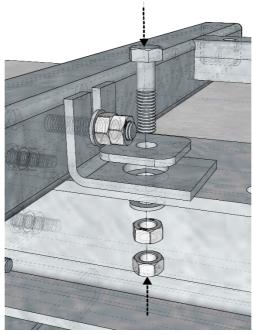

Prepare frame **GR120-12-P25** by adding 4x fixing brackets **GR120-10-P08** using 4x M12x100 bolts Distance between fixing brackets should follow distance between horizontal beams – 1400mm

i set the frame for equipment over prepared beams using 4x M12x40 bolts
